PROFESSIONAL SUMMARY

Innovative **Unity Game Developer** and **Systems Architect** with over [2] years of experience building complex multiplayer systems, XR experiences, and professional editor tools. Expert in **C# and Advanced OOP**, with a specialized background in **Technical Training and Education**. Proven track record of mentoring junior developers and creating high-impact educational content for the global Unity community. Specializing in modular architecture, network engineering, and performance optimization.

TECHNICAL SKILLS

Game Engineering & Architecture

- **Unity Engine:** Expert 2D/3D development, XR Interaction Toolkit (VR), URP.
- **Networking & Backend:** Mirror, Photon (PUN/Fusion 2), PlayFab, Dedicated Servers.
- **Core C#:** SOLID Principles, Design Patterns, ScriptableObjects, Modular Systems.
- **AI & CV:** MediaPipe, MoveNet (Computer Vision), NavMesh AI.

Tools, Web & Design

- **Editor Tools:** Custom Editor Scripting, Automation, Audio DSP, RCC Physics.
- **Web & Software:** React.js, HTML5, CSS3, GitHub (Version Control).
- **Design & Media:** Figma, Photoshop, Video Editing (Premiere Pro/Capcut).

Monetization & Live-Ops

- **Revenue:** Unity Ads, AdMob (Mediation/Bidding), In-App Purchases (IAP).
- **Backend Services:** Firebase (Analytics, Custom Events).

Performance & Leadership

- **Optimization:** Memory Profiling, Draw Call Reduction, ANR/Crash Resolution.
 - **Mentorship:** Technical Training, Code Reviews, YouTube Tutorial Production.
-

PROFESSIONAL EXPERIENCE

CEGA | Unity Technical Trainer *[Dec 2025 – Present]*

- Instructor for Unity Game Development, training 50+ students and junior developers in professional game architecture and C# best practices.
- Developed a comprehensive curriculum covering the end-to-end development cycle, from basic scripting to advanced.
- Provided hands-on mentorship and code reviews, resulting in several student projects successfully reaching the production stage.

Section Soft | Senior Unity Developer *[July 2024 - Present]*

- Lead the full development lifecycle of multiple titles from initial concept and prototyping to final Play Store deployment.
- Partner closely with 3D artists and UI/UX designers to integrate high-quality assets, ensuring technical feasibility while maintaining the artistic vision of the project.
- Managed the entire deployment pipeline, including asset bundling, performance profiling for mobile hardware, and handling localized support for 5+ global markets.
- Resolved critical performance bottlenecks and memory leaks, ensuring a 99%+ crash-free rate across diverse Android device profiles.

Upwork | Freelance Unity Developer *[2025 – Present]*

- **Full-Cycle Delivery:** Developed Unity projects for international clients.
- **Technical Versatility:** Implemented complex systems including Mirror/Photon multiplayer, AI integration, and optimized game architecture.
- **Client Management:** Managed the entire development lifecycle, delivering clean, modular code and consistent high-rated project success.

uTest | Freelance *[August 2020 – September 2021]*

- Performed functional and usability testing on mobile, desktop, and web apps.

- Logged reproducible bugs with clear documentation and repro steps.
-

EDUCATION & CONTENT CREATION

YouTube Content Creator | [MUS Labs]

- Create and produce technical tutorials focusing on **Unity Basics, Unity Editor Scripting, Automation, and Advanced C# Systems**.
 - Develop open-source tools and project templates to help the developer community implement clean, reusable code architectures.
 - Manage a growing community of developers, providing technical support and expert insights through video content.
-

KEY PROJECTS

Drone Air Attack | Lead Developer

<https://play.google.com/store/apps/details?id=com.disect360.drone.air.strike.war.drone>

- **Complete Lifecycle Development:** Developed a high-octane aerial combat simulation from prototype to successful **Google Play Store** deployment, managing all 3D assets, physics, and combat systems.
 - **Dynamic Localization Framework:** Engineered a robust, multi-language system supporting **Arabic (RTL), Chinese, and English**, ensuring seamless UI adaptation and font rendering without layout breakage.
 - **Optimized Combat Systems:** Implemented drone controls and a modular weapon system (missiles, Gatling guns) optimized for high frame rates on mid-range mobile devices.
 - **Live-Ops & Monetization:** Integrated a full suite of mobile services, including **Firebase Analytics, Unity Ads (Mediation)**, and in-app purchase systems for a sustainable game economy.
 - **Performance Engineering:** Achieved significant memory savings through optimized asset bundling and draw-call batching, ensuring stable performance during intense, VFX-heavy combat sequences.
-

Shadow Boxing Game | Lead Network Engineer

<https://mumar21.github.io/My-React-Portfolio-Website/>

- **End-to-End Product Development:** Developed the entire 1v1 multiplayer title from scratch, managing the full lifecycle from initial prototype to final server deployment.
 - **Infrastructure Pivot & Migration:** Originally architected the project in Photon, but successfully migrated the entire codebase to Mirror to meet client requirements for dedicated server hosting on PlayFab, ensuring greater control over game state and security.
 - **Authoritative Server Engineering:** Designed and coded a robust Client-Server authoritative model, implementing all server-side logic and RPC-based synchronization to ensure a cheat-proof, low-latency multiplayer experience.
 - **Comprehensive Systems Programming:** Engineered all core game systems, including advanced AI logic, real-time matchmaking algorithms, global leaderboards, and character customization frameworks.
 - **Full-Stack Implementation:** Developed both the high-performance client-side gameplay and the backend cloud infrastructure, ensuring seamless communication between the mobile client and PlayFab servers.
-

Farming Simulator | Lead Systems Architect

<https://mumar21.github.io/My-React-Portfolio-Website/>

- **Modular Architecture via Advanced OOP:** Designed a highly decoupled, "Plug-and-Play" tool attachment system using **Interfaces and Abstract Classes**, allowing for seamless integration of diverse farming implements (Plows, Sprayers, Harvesters).
- **Physics-Driven Vehicle Engineering:** Custom-tuned heavy-machinery physics and towing logic using the **RCC (Realistic Car Controller)** framework to simulate realistic weight distribution and torque.
- **Grid-Based Agricultural Logic:** Developed an optimized grid-based field management system to track real-time soil states and multi-stage crop growth cycles.

- **End-to-End Simulation Loop:** Engineered the full economy and gameplay cycle from soil preparation and harvesting to market-based crop sales, integrated with a game energy system and user onboarding flows.
 - **Clean Code Implementation:** Strictly applied **SOLID principles** and Design Patterns to ensure the codebase remains maintainable, reusable, and optimized for mid-range mobile hardware.
-

Computer Vision Pose Detection | AI & Interaction Developer

<https://mumar21.github.io/My-React-Portfolio-Website/>

- **Cross-Platform AI Integration:** Engineered a high-performance interactive system utilizing **MediaPipe** and **MoveNet** (TensorFlow Lite) to bridge physical movement with real-time digital gameplay.
 - **Multi-User Motion Tracking:** Architected a scalable pipeline to handle simultaneous multi-person pose detection, enabling split-screen local multiplayer where players control game elements via body centroids and skeletal landmarks.
 - **Gesture-Driven Event System:** Developed custom heuristic algorithms for gesture recognition (e.g., "Hands Up" triggers), replacing traditional button inputs with natural, touchless physical interactions.
 - **Real-Time Data Mapping:** Optimized camera-to-texture processing and coordinate remapping to ensure ultra-low latency between physical motion and in-game reaction.
-

Scene Optimizer Pro | Tools Programmer

<https://mumar21.github.io/My-React-Portfolio-Website/>

- **End-to-End Editor Engineering:** Designed and developed a comprehensive Unity Editor extension from scratch to automate the auditing and optimization of scene-specific resources (Textures, Meshes, and UI).
- **Real-Time Resource Telemetry:** Engineered a high-performance scanning engine that provides live analytics for GPU memory footprints and disk estimates, enabling data-driven optimization for production teams.

- **Automated Batch Workflows:** Architected a centralized dashboard for one-click texture and mesh compression, featuring a non-destructive "Revert" system and an intelligent issue reporter for high-memory assets.
 - **UX/UI for Technical Art:** Scripted a unique, futuristic, and highly responsive Editor UI to simplify complex memory management tasks into an intuitive, scannable workflow.
-

Beat Saber VR Clone | XR & Systems Developer

<https://mumar21.github.io/My-React-Portfolio-Website/>

- **Procedural Audio-Analysis Engine:** Developed an advanced Digital Signal Processing (DSP) algorithm that automates level generation by analyzing music frequencies and beat peaks to spawn nodes in real-time.
 - **Dynamic Music-to-VFX Synchronization:** Architected a modular "Beat-Sync" framework that orchestrates environmental lighting, block spawning, and particle effects based on real-time audio wave analysis.
 - **Tactile XR Interaction Design:** Engineered high-fidelity haptic feedback loops and satisfying saber-collision physics using the XR Interaction Toolkit to maximize player immersion and sensory "crunch."
 - **Data-Driven Level Generation:** Utilized ScriptableObjects and frequency-wave algorithms to create an automated system that determines block placement and slice direction, eliminating the need for manual level design.
-

CERTIFICATIONS & EDUCATION

- **[BS Computer Science]** | [City University of Science and Information Technology], 2024.
- **Little Adventurer: Learn to make a 3D action game with Unity** | Udemy, 2023.
- **Unity NEW Multiplayer Photon Fusion Game Development Course!** | Udemy, 2024.
- **Artificial Intelligence A-Z** | Udemy, 2026.
- **Unity Game Development Trainer** | CEGA, 2026.
